```

|gu| gu make lowercase   v -> selects stuff. The following modifiers apply:
|gU| gU make uppercase   a -> selects delimiters (like <{[(""")]}>)
|>| >   shift right   i -> selects only content
|<| <   shift left   for the two above:
(-> [count] sentences backward   s -> selects sentence
) -> [count] sentences forward   p -> selects paragraph
{ -> [count] paragraph backward   [-> a [block
} -> [count] paragraph forward   { -> a { block
                                       (-> a (block
                                       < -> a < block
                                       " -> a quote
                                       ' -> a quote
